Avoid Scald Risk Today !

Introducing the Inline Shower Thermometer (IST) by Nant Ltd

The simple solution to help prevent you and your residents from scald risk. As the name suggests the thermometer, is fitted inline, between the shower head and the shower hose. The thermometer has a LCD display with a LED light which acts as a visual alarm to warn the user/care giver of a scald risk if the water temperature goes above 41°C.

The alarm is set as per the shower temperature guidelines mentioned in the TMVA-Recommended code of practice for safe water temperatures and HTM04-01 Supplement. It is CE marked to conform to EU directives and guidelines.

Features

- 0°C to +69°C temperature range
- Accuracy $\pm 1^\circ\text{C}$ between 25°C to 50°C
- Visible alarm for temperatures exceeding +41°C
- Threads: ½" BSP male (for hose), ½" BSP female (for shower head)
- To wake up the thermometer from sleep (battery saving) mode, shake the unit or turn it upside down
- Large LCD display
- Helps saving energy, very simple installation - suitable for all standard shower facilities
- Waterproof
- Battery powered (batteries supplied)
